

## **(Senior) Computational Linguist**

ayfie provides market-leading search and text analytics solutions for legal, compliance, finance, healthcare and media that are based on more than 30 years of research and experience in linguistics, computational linguistics and computer science. Using this knowledge, ayfie has created a unique platform that combines best-in-class search technology with an innovative text analytics engine to deliver efficiency and better insights to businesses in all industries in European and American markets.

### **We are looking for experience and competence in:**

- Creating, expanding and testing Local Grammars for various domains
- Compiling and efficiently using large dictionaries
- Creating and adequately using large corpora
- Implementing and evaluating typical NLP tasks
- Experience and competence in Machine Learning / Deep Learning a plus

### **We are using ... — the more of them you know, the better:**

- Local grammars with huge dictionaries
- Finite-state technology
- Python
- Many natural languages – again: the more you know, the better

### **We provide an exciting work environment where we are striving for balance between:**

- Highly diverse demands and a sustainable development pace
- Correct description of linguistic phenomena and pragmatism
- Team activities and room for focus
- Motivating, demanding work and respect for private life
- Freedom and process
- Panlinguality and monolinguality
